New Hi Tech Acquisition for ICC Expands Capabilities

St. Louis, MO – ICC, a St. Louis-based engineering firm, today announced they have agreed to acquire PAC Engineering, a Rock Island, IL. based company. PAC, a 24-year old company that specializes in 3-D factory design and factory component database management, will now be a part of the ICC group of companies.

ICC, a 27-year-old company with 50 employees, specializes in providing engineering services and management consulting to process-related industrial clients. Their expertise has brought them extensive success within the Beer & Beverage industry, Fast Moving Consumer Goods (FMCG) and Pharmaceuticals. Mike Robson, president of the company, explained the merger is part of ICC's growth strategy. It is the second merger the company has orchestrated in the last six months. The first, also announced this week, is with Bertrand Consulting, a St. Louis-based consulting firm.

“Clients come to ICC for our expertise in process engineering,” explained Alex Alexandrov, ICC vice president. “By joining forces with firms who offer expertise that compliments our own, we are able to deliver a much higher caliber and broader range of service.” With the acquisition of PAC, ICC will be able to provide its client's with state-of-the-art laser scanning and 3D modeling services of existing facilities together with cutting edge process design and automation consulting.

For the foreseeable future, the 11 employees working in the Rock Island office will remain in place. They will continue to service current clients as well as be introduced to ICC's client roster. Stephen Dudzik, president of PAC since its inception, said he felt the synergy between ICC and PAC was in perfect alignment. “Joining forces with ICC at this point just makes sense. Clients are going to be able to see undeniable ROI with the package ICC delivers.”

About ICC

ICC is a 27-year old professional provider of engineering and consulting services. Headquartered in St. Louis, the company offers a wide range of engineering services –from Greenfield factory design to here-and-now production line adjustments. With extensive expertise in the Beer & Beverages, FMCG and Pharmaceutical industries, they specialize in cost savings, capacity extensions and quality improvements in batch-oriented production. The team offers a global outlook paired with experience from all continents, enabling them to deliver an unmatched combination of technical expertise and strategic insight.
