### *ICC to Design New Brewery in Angola*

St. Louis, MO. – Today, ICC announced the company has signed on to lead the design to tender phase of a new multi-million dollar new brewery project in Angola.

ICC is combining their consulting expertise with engineering methods developed during 20 plus year spent designing and expanding breweries, all powered by ICC's Project Management Smartbox. Anders Hummer, ICC's vice-president explains, "Our client came to us looking for solid process engineering expertise, professional project management skills as well as natural business acumen, which is the core of ICC's business."

Work is scheduled to begin right away, and ICC has currently a group of international engineers in Portugal, bringing together brewery professionals from all continents of the world including specific Angolan experience. "Our team's main focus will be on developing a highly efficient brewing process from intake of raw materials to cases of beer exiting the warehouse gate," said Hummer. "In addition, they'll provide knowledge to help guide brewery design to ensure optimal production and cost efficiencies."

The new brewery is a joint venture between Unicer, a Portuguese drinks company, one of the largest exporters of beer and beverages to Angola, and a group of Angolan investors. The first brew at the new facility is slated for 1<sup>st</sup> quarter 2016.

Brewery growth in Angola has been increasing since 2002 when the country began rebuilding its economy after two decades of civil war. The country's growing demand for beverages has enticed some of the world's largest brewers to set up shop in the developing country. "ICC is proud that we have been given the opportunity to get involved in this project. Ultimately, this brewery will create jobs for the people of Angola and contribute to the growth of the country's economy."

#### **About ICC**

ICC is a 28-year old professional provider of engineering services. Headquartered in St. Louis, the company offers a wide range of engineering services –from Greenfield factory design to here-and-now production line adjustments. With extensive expertise in the Beer & Beverages, FMCG and Pharmaceutical industries, they specialize in cost savings, capacity extensions and quality improvements in batch-oriented production. The team offers a global outlook paired with experience from all continents, enable them to deliver an unmatched combination of technical expertise and strategic insight.
